## FM TRANSMITTER INDIUM SERIES

The transmitters in this product line are available in 6 different power levels (150W, 300W, 500W, 1000W, 1500W and 2000W).

Winner of the Cool Stuff Award in 2012, these products combine ultra high efficiency, high reliability and low energy consumption in a sleek, 2RU high, compact rack mountable unit.

The 2U line maximizes the concepts of energy efficiency, compactness and reliability that have steered the design over the past ten years. All the transmitters in this line are extremely compact and light, which makes for greater ease in their installation and lower transportation costs. Their high energy efficiency also allows for a considerably lower operating cost. The line is also characterized by extremely high reliability and the ability to ensure high performance even under extreme

operating conditions due to intelligent safety protocols, Icefet technology, and Lifextender algorithms. The intelligent safety protocols are activated proportionately to the severity of the environmental condition, thus guaranteeing the maximum power output in respect to the safety of the equipment. The models from 150 to 500 watts can also operate with a DC power supply of 48VDC (operating range 40-56 VDC), designed for operation with renewable energy sources such as wind and/or solar.

### Features:

#### **High efficiency**

Extremely low-power consumption and reduced operating costs.

#### **Smart functions/synaptic functions**

Extraordinary performance level through the use of powerful operational algorithms and inter-module communications within the transmitter. These software algorithms adapt the transmitter to environmental conditions or to any connected device, preventing poor RF operation or diminished audio quality.

#### **Very compact size and condensed power**

Two rack units in height, with a weight of less than 14 kilograms (30.8 lbs), unmatched power versus volume and power versus weight ratio.

#### **Planar technology**

Exceptional stability, repeatability, reliability and ease of maintenance through the use of planar technology within the entire RF section (RF modules, combiners, splitter and low-pass filter). This allows for the minimization of internal connections and soldering, which increases the long term operation and performance.

#### **Connected everywhere**

The remote control and management features allow users to receive data and send instructions to the transmitter via several state-of-the-art communication channels — SMS, GPRS, TCP/IP and SNMP.

The Elenos Indium Series Low Power FM Series (LPFM) ETG150, 300.3 and 500.5 are now available for DC Operation in applications where AC Power is not available.

The Elenos LPFM Indium series can now be purchased with a DC source option which is designed to operate with renewable energy such as photovoltaic panels or wind turbines which natively produce DC power.

The new ETG LPFM FM Transmitters require a DC input voltage of 48V (40 - 56 VDC) from photovoltaic panels or other DC power source.

The guaranteed audio and RF performance. Is identical to that of our Indium LPFM transmitters which use single phase AC. The typical DC to RF efficiency is 80%.

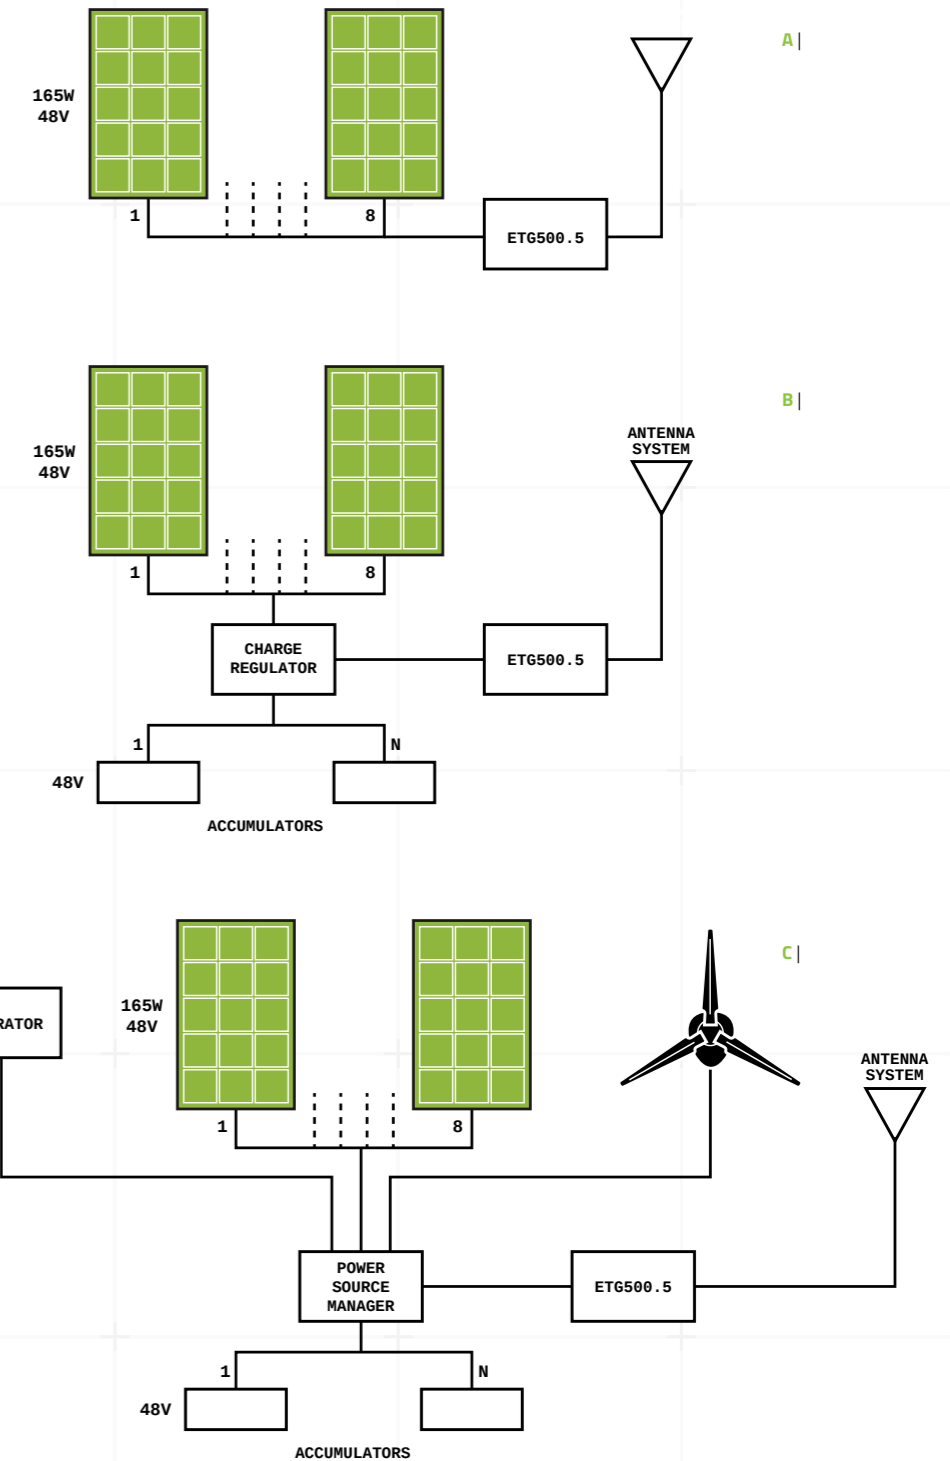

The transmitter typical consumption is as follows:

- @150W RF: 250W DC.
- @300W RF: 500W DC.
- @500W RF: 800W DC.

For transmitter technical data please see the ETG 150, ETG 300.3 or ETG 500 datasheets.

APPLICATION EXAMPLES

- A |** Photovoltaic solar panels without accumulators / batteries low cost and high reliability, service available only with the sun as the power source).
- B |** Photovoltaic panels with accumulators/batteries and charge regulator for most practical situations.
- C |** The transmitter can be supplied by a complete redundant system in order to avoid interruptions. In this case any combination of DC Power sources such as photovoltaic solar panels, wind generators or even a diesel generator which produces DC power can be used.
